Detailed Action

1. This communication is responsive to a **PRE-APPEAL REQUEST** filed on 4/19/2007, WHEREIN PROSECUTION IS HEREBY REOPENED.

Allowable Subject Matter

2. Claims 14, 16, and 19-20 are amended. Claims 1, 11-12, and 15 have been cancelled. Claims 2-10, 13-14, 16-17 and 18-22, renumbered as Claims 1-18 respectively are allowed over the prior art of record.

Reason for Allowance

3. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or fairly suggest the combination of elements as recited in the independent claim. Specifically prior art does not teach:

“wherein said fixed object type has a fixed title, and wherein said run-time object has a title defined during run-time”; nor does prior art teach “wherein if said parent object is of said fixed object type, defining said new object having a type out of a group comprising said fixed object, said run-time object, said leaf object and said link object; and nor does prior art teach “wherein if said parent object is of said run-time object type, defining said new object having a type out of a group comprising said fixed object, said leaf object, and said link object”.

The dependent claims being definite, further limiting and fully enabled by the specification are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

In the claims:

Please amend claim 18 as follows:

Claim 18 (Currently amended)

A method **for managing mobile communication**, comprising:

defining at least one new object to be associated to a parent object arranged directly superordinate to said new object, and part of a hierarchical object structure comprising a plurality of objects being hierarchically associated;

wherein said plurality of objects comprises different types of objects out of a group including at least a fixed object, a run-time object, a leaf object, and a link object; wherein said fixed object type has a fixed title, and wherein said run-time object has a title defined during run-time;

checking said type of said parent object; and

wherein if said parent object is of said fixed object type, defining said new object having a type out of a group comprising said fixed object, said run-time object said leaf object and said link object; and

wherein if said parent object is of said run-time object type, defining said new object having a type out of a group comprising said fixed object, said leaf object and said link object;

defining properties of said new object;

wherein said plurality of objects serves as template object for deriving corresponding nodes;

wherein said hierarchical object structure serves as a template structure for deriving hierarchical node structures; and

wherein said hierarchical node structure comprising a plurality of said nodes is employed for distributing management related information of an electronic device among said plurality of nodes, certain parts of said management related information being assigned to at least one of said plurality of nodes.

Authorization for this examiner's amendment was given in a telephone interview with Keith R. Obert on June 22, 2007.
